Education

University of Piraeus

Piraeus, Greece

2017

Bachelor of Computer Science

School of Information and Communication Technologies. Department of Informatics.

Specialization: Software Technologies and Intelligent Systems

Projects

<http://websiteforcampers.herokuapp.com/>

A website where users can register and upload camps and post comments. The whole project is set on Node.js using Express. Templating engine is EJS. Bootstrap library on top to have a responsive site.

When a user visits the landing page he sees all available camps that were created. The signup process is handled with Passport.js for authentication and MongoDB for storing credentials. Users can create new camps or add comments to existing ones. All the URLs follow the RESTful routes principle. The project is running on Heroku Server and the source code is on Github where you can also find more of my projects.
